

Assignment #7**Final Report/Portfolio and presentation requirements**

Submit both the report and a copy of your presentation slides

The final report: Put all the pieces together in a well-organized manner

- Title page
 - Title of your project
 - You do NOT need the name of your app (but you can!)
 - The title should give us an idea of what it is about
- Group members
 - Names and A-numbers
 - Roles/tasks of each member (as much detail as you can remember)
 - e.g.)
 - Member A: designed interviews, made design sketches, designed usability study
 - Member B: documented and analyzed all the data (interviews and usability study), wrote all the reports, made design sketches
 - Member C: conducted interviews and usability study, made sketches
 - Member D: assisted interviews/usability study (recording), made sketches, implemented the prototype

(Or you can use a table with Xs to indicate which tasks are performed by whom etc.)
- Problems/issues addressed (most parts can be copied and pasted from the previous assignment submissions)
 - A brief description of the problem, and issues observed
 - Briefly say how you collected data (e.g., interviews/questionnaires/observation with how many participants etc.)
 - Gathered requirements (i.e., a brief summary from Assignment #4, under the proper requirements categories)
- Designs (samples of the design progressions)
 - With explanations of 3-5 highlights of changes you made in each of the design iterations
 - Screenshots of the prototype of the final design (or mockups)
- Testing Cases and Results (you should have most of this from A06)
 - Complete your testing
 - Results
 - Analyses/Discussions of the results
 - What you can say from the results
 - e.g., Why your design was better/worse/no difference, etc.
- Future work
 - What you would do if you had a chance to continue
 - And how you would do it

Presentation video

- Max: Total of 10-minute presentation
- The (max) 5-minute summary of the above report
 - Problem statement/domain
 - Summary of requirements gathered
 - Initial design vs final design (this may be a good time to stick in your demo)
 - Final study/testing
 - Conclusion and future work
- Working prototype demo (or WoO) (Max: 5 minutes)
